

CCDS Final Year Project (FYP)

Report and Oral Presentation Guidelines

Introduction

The Final Year Project (FYP) Report and Oral Presentation are key assessment components of the FYP. They provide students with the opportunity to demonstrate their technical knowledge, independent learning, problem-solving ability, project management skills, and communication skills.

The report should present a clear and comprehensive account of the work undertaken, while the oral presentation should effectively communicate the project's objectives, methodology, implementation, findings, and contributions.

Students should also consult their supervisors regarding any additional project-specific requirements.

Report Writing Guidelines

The report should be:

- Written clearly, concisely and professionally.
- Using proper academic language and technical terminology.
- Cite all references appropriately.
- Ensure originality of work and avoid plagiarism.
- Explain technical decisions rather than simply describing code.
- Include diagrams, tables and figures where they improve understanding.
- Present sufficient detail to allow readers to understand the implementation and evaluation.
- Free from plagiarism and academic misconduct.

Report Preparation

Students may prepare their report using LaTeX (e.g., Overleaf) or Microsoft Word. As supervisors may have different preferences or formatting requirements, students are advised to confirm the preferred report preparation format with their FYP supervisor before commencing the report.

Students are strongly encouraged to write in their own words and acknowledge all sources appropriately.

All figures, tables, and equations should be numbered and appropriately referenced within the report. Standard International (SI) units should be used wherever applicable.

Report Length

The expected length of the Final Report will depend on the nature of the project.

As a general guide:

Report	Recommended Length
Interim Report	Approximately 50% of the completed Final Report
Final Report	Approximately 40–65 pages (excluding appendices)

Students whose projects require substantially longer reports should consult their supervisors before submission.

Interim Report

Purpose of the Interim Report

The Interim Report is a graded milestone that enables the supervisor to assess the student's progress, technical approach, and engagement with the project during the first half of the Final Year Project.

The Interim Report contributes to the overall assessment of the Final Year Project and serves as an important checkpoint to ensure that the project is progressing satisfactorily.

Assessment

The Interim Report is assessed solely by the project supervisor. At this stage, no examiner assessment is conducted.

Submission

Students should submit the Interim Report directly to their supervisor.

The submission method is determined by the supervisor and may include:

- Email
- Microsoft Teams
- Learning Management System (if applicable)
- Other platforms specified by the supervisor

Students are responsible for confirming the required submission method, report format, and submission deadline with their supervisor.

Content of the Interim Report

The Interim Report should demonstrate the progress made during approximately the first half of the project.

The report should include:

- Introduction to the project and problem statement
- Project objectives and scope
- Motivation and significance of the project
- Literature review and related work
- Proposed methodology or system design
- Work completed to date
- Preliminary implementation and results (where applicable)
- Project timeline and remaining work
- References

The Interim Report is expected to reflect approximately **50% completion** of the overall project.

Feedback

The Interim Report contributes to the supervisor's assessment of the Final Year Project.

While supervisors may provide qualitative feedback to guide further improvements, detailed mark breakdowns or numerical assessment components are generally not released to students.

Student Responsibilities

Students are expected to:

- submit the report by the stipulated deadline;
- produce original work that accurately reflects the project's progress;
- discuss challenges encountered during the project;
- demonstrate independent effort and technical understanding; and
- communicate regularly with their supervisor throughout the project.

Failure to submit the Interim Report or prolonged disengagement from the project may adversely affect the overall FYP assessment.

Final Report

The Final Report should provide a comprehensive account of the project from problem definition through implementation and evaluation.

Students should demonstrate that they have:

- Clearly defined the project objectives and scope.
- Conducted an appropriate review of related work and existing solutions.
- Designed and implemented an appropriate technical solution.
- Demonstrated independent work and original contribution.
- Explained the methodology, technologies and implementation process.
- Evaluated the solution using suitable experiments, testing or analysis.
- Discussed limitations of the project.
- Proposed recommendations or future work.

The report should be written in a professional academic style with appropriate citations and references.

As a general guide, the Final Report should typically be **40–65 pages**, excluding appendices.

Suggested Report Structure

Students may organise their report using the following structure:

1. Title Page
2. Abstract
3. Acknowledgements (optional)
4. Table of Contents
5. List of Figures
6. List of Tables
7. Introduction
 - Background
 - Problem Statement
 - Objectives
 - Scope
8. Literature Review
9. Methodology / System Design
10. System Implementation
11. Results and Evaluation
12. Discussion
13. Conclusion
14. Future Work
15. References
16. Appendices (if applicable)

Supervisors may require additional sections depending on the nature of the project.

FYP Oral Presentation

The FYP presentation provides students with the opportunity to demonstrate their understanding of the project and communicate the significance of their work to the examination panel.

Presentation Duration

- **Presentation:** Approximately **20–23 minutes**
- **Question & Answer:** Approximately **5 minutes**

Students should ensure that their presentation fits comfortably within the allocated presentation time.

Suggested Presentation Flow

A typical presentation should include the following:

Introduction

- Project title
- Background
- Motivation
- Problem statement
- Project objectives

Literature Review

Provide a concise overview of relevant existing work and explain how the project differs from or improves upon current approaches.

Methodology

Describe:

- Overall system architecture
- Design approach
- Algorithms
- Technologies used
- Technical challenges encountered

Implementation

Explain how the solution was developed, highlighting key components and implementation decisions.

Results

Present the outcomes of the project using appropriate evidence, such as:

- Demonstrations
- Screenshots

- Experimental results
- Performance evaluation
- Tables and graphs

Conclusion

Summarise:

- Project achievements
 - Key contributions
 - Lessons learnt
 - Future work
-

Presentation Slide Guidelines

Students are encouraged to:

- Include the following information on the title slide:
 - Student name
 - Matriculation number
 - Project title
 - Academic Year
 - Supervisor(s)
- Number all presentation slides.
- Use clear diagrams and illustrations to explain concepts.
- Minimise large blocks of text.
- Ensure fonts and figures remain readable.
- Use visual aids to demonstrate system architecture, workflow and project outcomes.

Where appropriate, students may include a short demonstration video or live demonstration to showcase their implementation.

Preparing for the Presentation

Students are encouraged to:

- Rehearse the presentation multiple times.
- Ensure the presentation can be completed within the allocated time.
- Anticipate possible questions from examiners.
- Be prepared to explain design choices, implementation details, experimental methodology, and project limitations.
- Verify that all presentation materials and demonstrations function correctly before the presentation.

Recording a rehearsal presentation may help students improve delivery, timing, and presentation quality.

Academic Integrity

Students are expected to uphold the University's standards of academic integrity throughout the FYP.

Students should:

- acknowledge all sources appropriately;
- avoid plagiarism;
- distinguish their own work from existing literature;
- comply with the University's policies on academic integrity.

Academic misconduct may result in disciplinary action.

Additional Guidance

Students are encouraged to discuss report structure, presentation content, and formatting expectations with their respective supervisors, as individual projects may have discipline-specific requirements or additional expectations.
